

Digital Gravity Infrastructure Partners Launches Today

New digital infrastructure investment group dedicated to building and growing platforms that deliver Sustainable Connectivity for generations to come.

Today marks the launch of DGP Capital Management Limited ("Digital Gravity", the "Firm"), a digital infrastructure investment advisor group. The team reunites seasoned experts who have led on over \$1.5 billion of investments in mid-cap growth digital infrastructure, with combined experience of over 140 years investing and managing these specialised assets.

"We are proud to introduce Digital Gravity. We have assembled a world-class team with a proven track record over the last decade of advising on mid-cap growth digital infrastructure assets, deploying over \$1.5 billion in just the last five years. Our team's expertise and focus, combined with our strong network of industry partnerships, uniquely positions us to identify and capitalise on opportunities in this dynamic market," said Thor Johnsen, Managing Partner.

The gravitational pull of people and networks is driving demand for digital infrastructure around the world. Digital Gravity believes the \$400 billion a year digital infrastructure market is a large, complex and evolving value chain with higher returns generated from a dedicated focus on building platforms in 'real assets'. As a specialised digital infrastructure investment advisor, Digital Gravity will focus on mid-market assets, offering a value-add approach to building and growing leading, neutral and scalable platforms in four domains: data centres, subsea and terrestrial fibre networks, and wireless technologies. Importantly, the Firm's clear focus will be on platforms that drive Sustainable Connectivity: improving digital inclusivity, bridging local and global digital divides between those with access to the internet and those without, but doing so in an environmentally sustainable manner, which includes decarbonisation of the full value chain.

"Integrity, innovation, stewardship, and sustainability are the cornerstones of our approach," added Johnsen. "We firmly believe that by identifying companies with innovative solutions we can create positive change in an industry ripe for disruption - the power of the digital world should be accessible to all with Digital Gravity poised to play a pivotal role."

Digital Gravity currently provides investment advice to a portfolio of assets, including a leading wireless infrastructure business in the United Kingdom, and will continue to advise on growing investments into leading providers of the infrastructure of the internet.

About Digital Gravity

Digital Gravity is a digital infrastructure adviser dedicated to building platforms that deliver sustainable connectivity for generations to come. The firm specialises in advising on investments that provide the critical infrastructure of the internet, with a focus on sustainable data centres, subsea and terrestrial fibre networks, and wireless technologies.

Digital Gravity aims to capitalise on the attractive market conditions driven by the global demand for a fast, reliable internet. We believe that we can play an important role in this growth sector by identifying companies that promote sustainable connectivity and therefore shape the future of digital infrastructure, ensuring its availability and accessibility for generations to come.
